Exceptional customer service

The Management Team

The revolutionary movable spray booth

The fast track repair process

We are a state of the art repair facility run by a team of professionally trained technicians using specialist equipment and the very latest UV technology.

As a family business we maintain a very personal and friendly service for all our customers. We have been in this industry for over 20 years and have a well respected reputation with Insurance Companies and many other organisations.

Our aim is to offer all our customers the reassurance of a first class repair with the minimum fuss and inconvenience- a service which is second to none. Our professional, friendly and helpful staff will provide all the advice and assistance you need to make the whole experience as pleasant as possible.

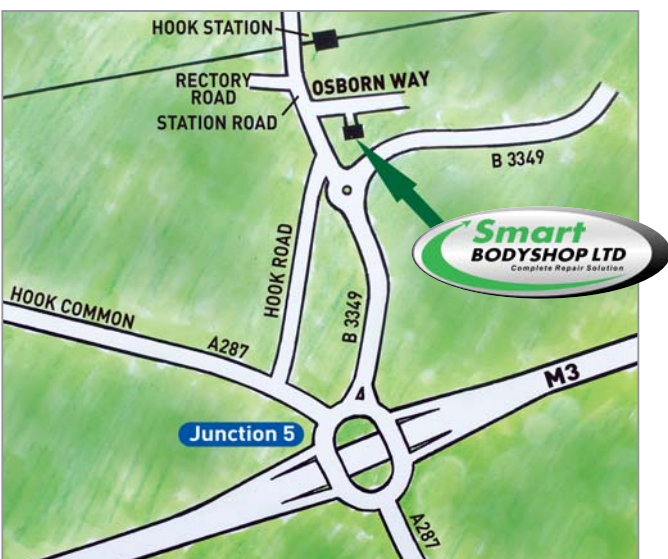

Supporting our unique workflow processes is our unique technology. Our innovative Tempo Express Repair Technique Spray booth can move over the vehicle rather than moving the vehicle. Used in conjunction with the latest UV paint technology we are able to apply and cure paint within minutes.

Fast track repair process

The repair process starts with an assessment by one of our qualified vehicle damage assessors and using one of our computer generated appraisals which fully meet the industry regulations.

Your vehicle will then be scheduled in to our Bodyshop using our sophisticated scheduling software which utilises all available resources to fast track your vehicle through the repair process. Smart Bodyshop encompasses 'continuous workflow', which makes sure that from the moment that your car enters the workshop it never stops being worked on ensuring minimum VOR times.

Smart Bodyshop - consistently keeping pace with an ever changing industry
